 AB The nucleotide sequence of the .beta.-lactamase gene ampC of E. coli was  
 detd. The ampC gene contained both a promoter and an attenuator;  
 mutations in both types of control sequences resulted in elevated prodn.  
 of .beta.-lactamase. Data are presented which suggest that the growth  
 rate-dependent regulation of ampC (Jaurin, B.; \*\*\*Normark\*\*\*, S.,  
 1979) is due to antitermination of transcription at the ampC attenuator.
